Available for speaking engagements worldwide

Human possibility. Responsible authorship.

Mykola Latansky explores self-knowledge, human agency and meaningful contribution in the age of AI. His work asks how we remain involved in shaping our purposes, reasons and decisions. He brings more than twenty years of international speaking and teaching in human development to this philosophical inquiry.

Master's degree in Engineering

University of Oxford · Completed the Certificate of Higher Education programme in Philosophy

Perfection is killing your success

Three ways into the human question.

Philosophy · Artificial intelligence · Digital humanism · Public dialogue

01

Human Genius in the Age of AI

FLAGSHIP

Philosophy of AI, digital humanism and interdisciplinary conferences.

What does it mean to remain the author of a meaningful human life as AI helps us think, create and decide? This talk introduces Human Genius as a broad framework of self-knowledge, responsible action and contribution.

- Human genius as a possibility expressed through judgement and commitment.
- How AI influences both the answers we receive and the purposes we pursue.
- Where assistance strengthens human authorship, and where it displaces it.

02

Original Human Agency

AI ethics, philosophy of technology and university seminars.

Final approval does not establish that a person shaped a decision. This talk examines participation in forming goals, examining reasons and revising choices. It distinguishes augmented from derivative agency in human–AI collaboration.

- Authorship across purpose, framing, judgement and responsibility.
- Examining and revising the criteria behind AI-assisted decisions.
- System and institutional conditions for substantive human participation.

03

Inquire Within

Public philosophy, education and human development events.

How do we recognise a direction as our own? Drawing on Genialism™, this talk connects intellectual, emotional, intuitive and bodily self-knowledge with meaningful commitments. Inner conviction remains open to evidence, dialogue and revision.

- Four dimensions of self-understanding and their role in inquiry.
- Examining inherited expectations, convictions and reasons for action.
- Moving from self-knowledge to responsible commitment and contribution.
